A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on October 10, 2003 has been entered.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1,6,14,17,22-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Menashi '939 or Enomoto '811.

Menashi and Enomoto each suggests the instantly claimed product having the instantly claimed characteristics. See Table IX, cols. 19,20 of Menashi; and col. 2 of Enomoto. The taught not larger than 0.1 micron and specific surface area of 20-30 m²/g overlaps that instantly claimed and therefore would have been obvious, the subject matter as a whole would have been obvious to one having ordinary skill in the art at the time the invention was made to have selected the overlapping portion of the range disclosed by the reference because overlapping ranges have been held to be a prima facie case of obviousness, *In re Malagari*, 182 USPQ 549.

Any difference imparted by the product by process limitations would have been obvious to one having ordinary skill in the art at the time the invention was made because where the examiner has found a substantially similar product as in the applied prior art the burden of proof is shifted to the applicant to establish that their product is patentably distinct not the examiner to show the same process of making, *In re Brown*, 173 USPQ 685, *In re Fessmann*, 180 USPQ 324, *In re Spada*, 15 USPQ2d 1655, *In re Fitzgerald*, 205 USPQ 594, and MPEP 2113.

Where the claimed and prior art product(s) are identical or substantially identical, the burden of proof is on applicant to establish that the prior art product(s) do not necessarily or inherently possess the characteristics of the instantly claimed product(s), see *In re Best*, 195 USPQ 430.

Applicant's arguments filed October 10, 2003 have been fully considered but they are not persuasive.

The Declaration by Akihiko Shirakawa is unpersuasive since Menashi does not require a washing step, see col. 7, lines 55-57. Furthermore, the Declaration is not commensurate in scope with the instant claims since it states unexpected electrical properties of the instant product however no such electrical properties are instantly claimed.

Bruno has been withdrawn as a prior art rejection as it teaches a particle size range of 0.2-1.0 micron which is outside the instantly claimed range.
